

Detailed Job Description (JavaScript + Web Front End Developer)

About Akixi Limited

Akixi is a small, dynamic and highly successful privately owned company based in modern offices near the centre of Crawley, West Sussex. It provides a web-based real-time contact centre reporting application running in a cloud computing environment and Akixi are currently the only company in the UK who provide such a leading edge service in this way. Akixi is proud to have received a number of business awards, most recently the Comms Business Most Innovative Cloud-Based Product. We are looking for a talented front end web developer/designer to fill this exciting new position created following a period of business growth. This is a brilliant opportunity to join a successful and growing team.

What is the job like?

Reporting to the Software Development Manager, you will be working within a small team of experienced developers. Your primary focus will be front end web development and we are looking for someone who has a passion for design along with excellent programming skills. If you are able to enhance a user's web experience by bringing it to life with excellent visuals and tools then we would love to hear from you. With your experience of using multiple frameworks, you will be developing our web application using your ability to produce images from scratch and be expert at using and developing bespoke JavaScript widgets. Also you will be able to produce a user interface which has a great look and functionality across mobile applications. This position presents an excellent opportunity to make a direct impact on our Company's cloud-based product.

Key Responsibilities

Application User Interface Design

- Maintaining and then significantly enhancing all aspects of the Akixi Service's real-time reporting user interface and administration portals
- Designing impressive and highly aesthetically pleasing browser-based user interfaces, with a passion for writing awesome code that is well-structured and highly maintainable.
- Maintaining a high awareness of industry issues and trends, particularly in regard to accessibility, usability, Internet security, and emerging technologies, with a view to incorporating these in future projects and staying ahead of the market.
- Constantly seeking to develop yourself by learning new technologies and keeping abreast of market developments.
- Collaborate with other team members to ensure seamless implementation of web application enhancements.
- Assisting with improving & maintaining our Company website.

Health and Safety

- Compliance with the Company health and safety policy.
- Reporting any health and safety issues to management.

Additional Duties

- Undertake project work as requested.
- Any other duties as required.

Qualifications & Experience

- Degree (2.1 or above) or PHD in computer science or electronic engineering.
- 4-5 years' commercial experience developing web applications with significant client-side dynamic web page content, supporting both modern & legacy browser technology.
- Extremely up-to-date general knowledge of current web technologies including multiple JavaScript UI libraries, custom self-built JavaScript widgets, Internet Security and application vulnerabilities, dynamic client-side content, supporting Java backend component & logic development, etc.
- Expert knowledge of HTML, full CSS box model, Adobe Photoshop, and JavaScript to create modern, impressive & attractive, mobile-friendly, reliable, and highly intuitive client-side dynamic web application functionality.
- Dynamic web page generation using Java Servlets & Java Server Pages, including experience doing some supporting back-end design & development.
- Candidates with past experience of multiple programming languages like C/C++, Java, etc. would be advantageous.
